# SHOWER SCREEN MEASURING GUIDE

## 1. MEASURE YOUR SHOWER AREA

Only after you have completed installing your shower base, plumbing and tiling you will be able to measure the exact area ready for the shower screens, measure either:

Option 1 - measure base from internal recess

Option 2 - measure tiles from wall to wall

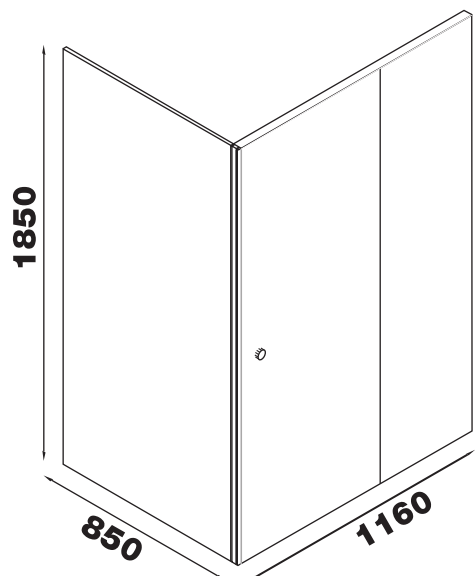

Now you will have your front door width and return panel width.

Some of PIPERS Showers have standard heights either 1850, 1900, 2000 or custom made sizes.

## 3. YOU ARE NOW READY TO

Use a spirit level to check if walls & base are square, please show this on your order drawings.

It's in the interest of first time shower screen buyers to make sure they are familiar with the basic features and functionalities. There are many styles and designs, each one performing and looking differently.

PIPERS trained professionals can share their experience and give you the best advice for your project. All of our showers have undertaken research and development, we take pride in our product design and look forward to starting your project!

NOTES

Five horizontal lines for writing notes.

To view our extended range of products visit [www.pipersinternational.com.au](http://www.pipersinternational.com.au)

Please note:

- 1. There is no refund or exchange on items that are custom made, or unpacked or installed.
- 2. Please take care in providing measurements and choosing your products carefully. PIPERS will not accept any responsibility for incorrect measurements or specifications by the client.
- 3. Please choose your style carefully & understand the products specifications i.e. some frameless showers are known to leak due to the required gap in the door or if your shower rose is facing it.
